

MEMORANDUM #5

Date: August 05, 2022

To: All EIMPRIS team members

From: MediMergent Project Team

RE: Laboratory Reference Manual V1.0 dated 04Aug2022 and SARS-CoV-2 at home test kit expiry

Hello EIMPRIS Team Members,

ESR-11-21698 Laboratory Reference Manual:

Attached please find the ESR 22-21698 study Laboratory Reference Manual V1.0 dated 04Aug2022. Please forward this memo and Laboratory Reference Manual to all staff members involved with study lab sample collection, processing, and shipment to the laboratories.

Please note that the sample collection schedule in the Laboratory Reference Manual corresponds to the ESR 22-21698 amended protocol dated 08Jul2022 and 21Jul2022 which your site should have received IRB approval for by now.

SARS-CoV-2 at home test kit expiry:

Please review your SARS-CoV-2 at-home test kit supply and let us know how many kits you have left and the expiry of your supply. It is important to ensure you have supplies that are not expired and that patients are also using kits that are not expired. The ESR 22-21698 Laboratory Reference Manual has information on the extended expiry of these kits that you have already received (see the letter at the back of the Laboratory Reference Manual). We will be sending you a resupply of test kits as needed.

Feel free to reach out to us any time at eimpris@eimpris.com or **800-757-7345** if you have any questions or are in need of anything. We are here to support you.
